Loading pipes for flammable liquids on offshore supply vessels belong to the same piping class as the fuel. Class II piping suffices outside of category A engine rooms.

Pipes for toxic or corrosive fluids belong to piping class I.

Loading pipes for chemicals or liquefied gases are not specified in the table.

<sup>1)</sup> At least one condition must be met for class I piping (design pressure or design temperature).

<sup>2)</sup> Both conditions must be met for class II piping (design pressure and design temperature).

<sup>3)</sup> Both conditions must be met for class III piping (design pressure and design temperature).

<sup>4)</sup> Cargo oil pipes on oil tankers and open pipe outlets (drains, overflows, ventilation, boiler drain pipes, etc.), irrespective of pressure and temperature, belong to class III.

## Coating and preservation

- Coating and preservation to KSB standard

## Product benefits

- Designed to deliver reliable operation with mineral and synthetic thermal oils up to 350 °C
- Maximum operating reliability ensured by KSB mechanical seal with multi-spring arrangement and reliable venting during pump operation
- Safety barriers: Special contour ensures reliable removal of leakage at the mechanical seal; confined sealing elements and effective heat barrier
- Individual requirements are met with maximum efficiency, and operating costs are reduced: impeller trimming, variable speed operation / intelligent control by KSB frequency inverters and KSB motors up to IE5, maximum hydraulic pump efficiency and low NPSHreq
- Wide range of applications through compliance with EN PN16 and ASME, ATEX-compliant version, carbon plain bearings, various marine versions and fan impeller for efficient cooling
- Great ease of maintenance due to casing wear rings and back pull-out design enabling the casing to remain in the piping during maintenance.
